

# Luxembourg Airport uses 120-foot off-grid solar-powered container

## Overview

---

The HJ Mobile Solar Container comprises a wide range of portable containerized solar power systems with highly efficient folding solar modules, advanced lithium battery storage, and. During the feasibility study, Transsolar was commissioned to develop and evaluate the theme of the „plus energy“ parking garage. Detailed simulations were carried out on the orientation and position of photovoltaic (PV) elements, which were also economically evaluated. The Solar PV container is a mobile,plug-and-play. Implementing microgrids at airports comes with an array of potential advantages, namely the ability for an airport to increase its energy resilience and sustainability. Because microgrids are separated from the main electrical grid, they enhance the reliability and stability of a power supply. Each system integrates solar PV, battery storage, and optional backup generation in a modular, pre-engineered platform that is scalable for projects ranging from 5kW to 5MW+.
