

# Make a solar generator using sand

## Overview

---

In this video I show step by step how to build a solar powered sand battery with used panels, the heating element from a water heater and some sand from home depot. I generated over 250F in just a few hours. In this article, we will explore the potential advantages and disadvantages of using sand as a battery. A research project aims to design, build, and test a sand battery for household heating purposes, replacing traditional geyser systems. By using natural and readily available materials, such as sand and basic heat transfer technology, you can build an energy storage system suitable for both small-scale. Portable, weatherproof, and ready-to-rock — a homemade solar generator can meet all your power needs in and around your boat, camper, or cabin. Do you have what it takes to make one yourself?

My family owns a cozy off-grid cabin in the hills, but since there's no electricity, I'd only stay there. Another option is a thermal battery, which basically means making something hot, and later extracting that heat again. By running a current through a resistive wire that's been buried.
