

Mexico New Energy digs deep into energy storage batteries

Overview

A month after India introduced an energy storage mandate for renewable energy plants and China scrapped its own, Mexico has stepped forward with an ambitious 30% capacity requirement, alongside plans to add a further 574 MW of batteries by 2028. Future wind and solar energy projects in Mexico will. Mexico's new regulation mandating battery systems for solar and wind projects positions it as a model for energy storage integration in Latin America, according to a new report. Mexico has released a binding 15-year power sector development plan (PLADESE) that mandates a massive, state-led clean energy buildout. These systems allow for electricity, whether surplus or not, to be stored and released during.
