

# National Standard for Wind Turbines

## Overview

---

In a groundbreaking move, the American Society of Safety Professionals (ASSP) has published the first industry consensus standard written specifically for the construction and demolition of wind turbines: ANSI/ASSP A10. 21-2018: Safety Requirements for Safe Construction and. Wind turbine standards address design requirements and considerations, as well as associated components, systems, and technologies that have an impact on the reliable functioning of wind turbines. With the extensive IEC 61400 series covering topics as far ranging as full-scale structural testing. This project provides funding to participate in and, where logical, lead the development of domestic and international standards. The project also supports the education and engagement of the U. Distributed wind turbines are no exception. Standards play an important role in everyday life. IEC 61400 is a set of design requirements made to ensure that wind turbines are appropriately engineered against damage from hazards within the planned lifetime.

## National Standard for Wind Turbines

 **TAX FREE** 

**Product Model**  
 HU-ESS-215A(100KW/215KWh)  
 HU-ESS-115A(50KW/115KWh)

**Dimensions**  
 1600\*1280\*2200mm  
 1600\*1200\*2000mm

**Rated Battery Capacity**  
 215KWH/115KWH

**Battery Cooling Method**  
 Air Cooled/Liquid Cooled
