

# New Zealand solar power station energy storage cost

## Overview

---

**Overall Costs:** The average total price paid for a battery system is \$14,396, indicating that energy storage is still a significant investment for many. The lowest price paid was \$8,000 for a 6 kWh battery, which implies that smaller systems can be more accessible for those on a. This appendix sets out the detail of solar capital costs used in the EECA residential solar study. All costs given in this appendix are New Zealand dollars and include GST. A range of PV inverter capacities was used in the model, with PV array. **Average Price For A Solar Power System:** The typical solar power system size from our dataset was a 7kW, the average cost for this system size was \$16,492. 7 kW and the average small and medium enterprise system was 38 kW. [2] Solar power systems can be divided based on their nameplate capacity and their obligations under the Electricity Industry Participation. Once the costs of the system installation are recovered through energy savings after 7 to 10 years, solar energy can be obtained for free. With virtually no fuel costs.
