

New energy storage installed capacity scale

Overview

In 2025, capacity growth from battery storage could set a record as we expect 18. We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U. This amount represents an almost 30% increase from 2024 when 48. EIA's latest monthly "Electric Power Monthly" report (with data through Novem), once again. Battery storage in the power sector was the fastest growing energy technology in 2023 that was commercially available, with deployment more than doubling year-on-year. Strong growth occurred for utility-scale battery projects, behind-the-meter batteries, mini-grids and solar home systems for. 27. This is one of the main takeaways from the 'Sustainable Energy in America 2025 Factbook', the latest. Battery energy storage has become a core component of utility planning, grid reliability, and renewable energy integration.
