

North American rooftop solar panels

Overview

North America rooftop solar panel market reached a valuation of \$8.8 billion in 2025 and is forecast to expand to \$16.4 billion across the 2026–2035 period. Rooftop solar and distributed installations are driving the transformation of the US energy landscape. Experts discuss findings of new report and local and state leaders share strategies for sustaining rooftop solar growth. On February 13th, Environment America Research & Policy Center organized a webinar to release a new report, *Rooftop solar on the rise: Small solar projects are delivering 10 times the value of residential rooftop solar PV installations that are used to generate electricity for residential purposes*. Driven by escalating environmental concerns, supportive government policies, declining technology costs, and increasing consumer awareness, the market has grown significantly. *North America Rooftop Solar Market by Location of Deployment (Residential, Commercial and Industrial), by Geography (United States, Canada, Rest of North America), by United States, by Canada, by Rest of North America Forecast 2025-2033* I have received the report already. These systems convert sunlight into electricity, offering a sustainable and cost-effective solution.
