## Overview

---

Support production, treatment, and pumping with temporary microgrids for remote operations that's designed to fit your existing environment and business needs. Our solutions support a wide range of energy sources, including renewables and dual fuel generators. While reciprocating engines have been widely used, natural gas turbines continue to grow in popularity thanks to their power density and therefore smaller footprint on location, as well as their reliability and reduced maintenance requirements. However, the supply of turbine-based mobile gensets is. Electric ship propulsion and grids, energy management and energy efficiency for the world's maritime fleets, from naval ships to commercial marine transport and vessels for offshore industries. Don't delay your start day due to a lack of grid power. Aggreko. Oil and gas drilling rigs often cannot easily - if at all - access the electric grid because they are located in remote outposts of North Dakota, Wyoming, Colorado and other energy rich states. That leaves them dependent on diesel generators to power their drilling operations and camp sites. This article presents a practical roadmap for upstream electrification, empowering energy leaders to rethink how oil and gas platforms can. wind turbine hybrid energy.
