

On-site energy like solar energy

Overview

Onsite energy can encompass a broad range of technologies suitable for deployment at industrial facilities and other large energy users, including battery storage, combined heat and power (CHP), district energy, fuel cells, geothermal, industrial heat pumps, renewable. Onsite energy can encompass a broad range of technologies suitable for deployment at industrial facilities and other large energy users, including battery storage, combined heat and power (CHP), district energy, fuel cells, geothermal, industrial heat pumps, renewable. Onsite energy refers to electric and thermal energy generation and storage technologies that are physically located at a facility and provide alternative energy services directly to the site. Many facilities have recognized the advantages of on-site renewable energy. Onsite energy is also referred to in the industry as Distributed energy resources (DERs). Think of solar panels on our rooftops or in our car parks, generators behind our buildings, or battery. As businesses work toward reducing their carbon footprints and energy costs, they face a pivotal decision: should they opt for an onsite renewable energy solution, like a rooftop solar installation, or consider an offsite option, such as grid-connected Open Access solar?

Each path has its own.

On-site energy like solar energy

Neufin , Onsite versus offsite: choosing the right renewable energy

Onsite solar installations are renewable energy systems deployed directly on your business premises. These systems offer immediate and visible benefits while giving you direct ...
