

# Pakistan has many energy storage projects

## Overview

---

As Pakistan targets 30% renewable energy by 2030, energy storage technologies, particularly battery energy storage systems (BESS), are emerging as critical enablers for integrating intermittent solar and wind power into the grid. With a population exceeding 240 million and peak electricity demand projected to reach 35,000 MW by 2025, the country's energy sector is under strain (Apex Solar). Load-shedding, costing the economy \$6–8 billion annually, underscores the urgency for reliable solutions. Consumers are combining solar with Battery Energy Storage Systems (BESS) to reduce grid dependence, lower energy bills, and improve reliability. The increase from surcharges and duties on lithium-ion batteries. The payback period ranges. Pakistan imported an estimated 1. The report projects these imports. In recent years, Pakistan has faced a significant energy crisis, characterized by peak demand often surpassing generation capacities, leading to daily load-shedding in urban centers and a grid that has become a bottleneck for economic growth. The announcement was made at a.
