

# Photovoltaic bracket bonding base

## Overview

---

Two Hole Photovoltaic Base Bracket either called Grounding Connector, is a mounting accessory for fixing and supporting solar panels. It is usually made of corrosion-resistant hot-dip galvanized steel or aluminum alloy and has two mounting holes for firmly fixing the bracket to the. Properly grounding solar PV systems is one of the most critical aspects of a safe and reliable installation, governed by Part V of NEC Article 690. PV equipment needs to be properly bonded, in addition to code-compliant grounding, so that the low current flows on metal parts can facilitate the operation of over conductor shall have a dc grounding system. The dc grounding system shall be bonded to. The installation selection of photovoltaic ground brackets is mainly based on factors such as the fixing method of the bracket, terrain requirements, material selection, and the weather resistance, strength, and stiffness of the bracket. First, there are many fixing methods, such as pile foundation. Whether you're installing ground-mounted panels or a rooftop system, understanding how to use photovoltaic bracket bases properly can mean the difference between a system that lasts decades and one that becomes a neighborhood eyesore. Let's face it - nobody gets excited about photovoltaic bracket.
