

# Photovoltaic bracket is a building material

## Overview

---

Solar photovoltaic bracket is a special bracket designed for placing, installing and fixing solar panels in solar photovoltaic power generation systems. The general materials are aluminum alloy, carbon steel and stainless steel. First off, it's incredibly strong. PV systems are often installed in various environments, from rooftops to large - scale solar farms. Steel brackets can withstand a significant amount of weight, including. The installation structure of solar photovoltaic brackets should be simple, strong and durable. The fixed bracket is self-explanatory. In 2025, material selection has become the make-or-break factor for solar projects. Imagine building a skyscraper with toothpicks.

## Photovoltaic bracket is a building material

---

### Photovoltaic ground bracket installation options

The support material needs to be strong and stiff enough to withstand the weight of the PV modules and wind loads. At present, solar steel brackets mainly use lightweight structural steel and small-section ...
