

# Photovoltaic bracket is safe

## Overview

---

Photovoltaic systems are electrical in nature, and there's always a risk of electrical shock. Make sure all power sources are turned off before you start working on the electrical connections. And if you're not experienced with electrical work, it's best to hire a professional. Avoid installing the brackets during bad weather like heavy rain, strong winds, or storms. These conditions can not only make the installation process difficult but also pose a serious safety risk. These brackets must meet strict safety standards to maintain structural stability and withstand environmental challenges. As an important component of a PV power plant, PV supports carry the main body of the PV power plant for power generation.
