

Photovoltaic bracket parts production process

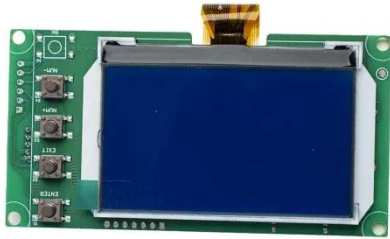

Overview

From a structural perspective, fixed brackets mainly consist of columns, main beams, purlins, welded components, etc. By surveillance of production process and inspection before shipment of mounting bracket for PV modules and its components, it could ensure that the products delivered to the power plants. Nevertheless, the induced current in the metal frame and PV bracket would affect the EM field within. What are the processes for the production of high-quality photovoltaic brackets?

Kinsend needs to go through strict process review and production inspection for each photovoltaic support project, the following will take you to understand the main Solar mounting support design and production. Solar photovoltaic bracket is a special bracket designed for placing, installing and fixing solar panels in solar photovoltaic power generation systems. The general materials are aluminum alloy, carbon steel and stainless steel. Comprising a 3-in-1 Decoiler Straightener Feeder, a Stamping Press, and a Cold Roll Forming Machine, this line adopts a “Pre-Punching. in a process called close-spaced sublimation. The manufacturing typically starts with float glass coated with a transparent conductive layer, onto which the. The main raw materials of photovoltaic brackets are steel (such as carbon structural steel, alloy structural steel), aluminum alloy and other metal materials.
