

# Photovoltaic panel carbonization equipment

## Overview

---

Photovoltaic panel recycling machine, also known as photovoltaic panel recycling equipment or photovoltaic panel dismantling and recycling equipment, is a mechanical device specifically used for dismantling and processing waste photovoltaic panels. The general process for recycling photovoltaic modules involves three main stages: 1. Disassembly of components through machinery or manual labor to remove. To effectively recover reusable materials such as metal and glass, an automatic dismantling machine becomes the key equipment. How Are Solar Panels Recycled?

A Step-by-Step Breakdown Solar panels consist of glass (75% by weight), aluminum frames, silicon cells, and trace metals like silver. Victor Machinery offers a full range of carbonizing furnace products. Including: continuous carbonization furnace, biomass carbonization furnace, waste carbonization furnace, sludge carbonization furnace, coconut shell carbonization furnace, etc. Customized solutions are available free of charge.
