

Photovoltaic panel connection location

**Low Voltage
Lithium Battery**

6000+ Cycle Life

Overview

Conduct a thorough site assessment to identify the best location for your panels. In the Northern Hemisphere, south-facing roofs receive maximum sunlight. Avoid north-facing installations as they generate minimal. Though many electrical and mechanical components are used while installing solar panels, below is a list of the basic components. There are several ways to connect the panels (series, parallel, mixed) and the choice depends on your installation. Most modern photovoltaic systems for residential or portable use don't actually require much "wiring."
