

Photovoltaic panel installation lightning protection

Overview

This article reviews the best lightning protection solutions for solar panels, including surge protectors, combiner boxes with integrated lightning arresters, and DC circuit breakers designed specifically for photovoltaic (PV) systems. Solar PV systems are designed to collect energy from sunlight, but they also have large metallic components including panels, frames, and mounts, along with extensive electrical wiring. Both metal and wiring serve as excellent paths for electrical currents, making solar installations natural. This guide provides comprehensive information on lightning protection strategies that complement our robust panel designs across all installation types. Drawing from decades of installer experience, we'll explore the most cost-effective techniques generally accepted by power system installers. This is an effective safety measure.

Get Grounded Grounding Rods Grounding Power Circuits Array Wiring & "Twisted Pair" Technique Additional Lightning Protection Lightning Arrestors Lightning Rods Out of Sight, Not Out of Mind "Lightning rods" are static discharge devices that are placed above buildings and solar-electric arrays, and connected

to ground. They are meant to prevent static charge buildup and the surrounding atmosphere's eventual ionization. They can help prevent a strike and can provide a path for a very high current to ground if a strike does occur. Modern See more on solarinsure Author: Ki SongGag The Surge
