

Photovoltaic panels can break

Overview

Common causes of solar panel damage are falling objects, thermal stress, and micro-cracks and scratches. Solar panels can save money, energy, and frustration, but they're not a perfect solution to home energy needs. Photovoltaic (PV) modules require regular maintenance, so while solar is passive, you don't get to be. They're also the most vulnerable part when dealing with nature's elements. Still, you should know the reasons why they break, how to help prevent breakages, and what to do if it happens. Whether due to weather conditions, accidental impact, or manufacturing defects, damaged solar panels can. If a solar panel breaks, it can reduce energy output and may pose safety risks. Damaged panels should be repaired or replaced.
