

Portugal s battery storage

Overview

Portugal's Greenvolt will spend €60M on Europe's largest battery storage hub, boosting EU grid stability, adding skilled jobs at home and lowering energy bills. Why This Matters • Renewable integration: Batteries become indispensable. To manage this rapid growth and ensure reliable grid operations, the PNEC also plans for 1.5 GW of battery storage capacity. This is vital for stabilizing the public electricity grid (known as the Rede Elétrica de Serviço Público, or RESP). Portugal: Portugal has unveiled a \$480 M (€400 M) investment package to modernise its electricity grid and significantly expand battery energy. Portugal is significantly advancing its plans to boost national energy infrastructure by integrating 2 GW of battery capacity into its electricity grid.

Galp and Powin to build large-scale energy storage system in Portugal

This 5MW/20MWh battery system is Galp's first move in the hybridization of its solar power production portfolio - which is one of Iberia's biggest at close to 1.5 GW in operation.
