

# Price Reduction for 2025 Model of Mobile Energy Storage Container Hybrid

## Overview

---

Figure ES-1 shows the suite of projected cost reductions (on a normalized basis) collected from the literature (shown in gray) as well as the low, mid, and high cost projections developed in this work (shown in black). Golden, CO: National Renewable Energy Laboratory. This report is available at no cost from NREL at [www.nrel.gov](http://www.nrel.gov). According to Ember's Decemreport "How cheap is battery storage?"

”, the all-in capital expenditure for large, long-duration utility-scale Battery Energy Storage System (BESS) projects has fallen to approximately \$125 per kilowatt-hour (kWh). This figure comprises roughly \$75/kWh for core. From price swings and relentless technological advancements to shifting policy headwinds and tailwinds, 2025 proved to be anything but uneventful. That was a 31% decline from 2024 numbers. Although the annual survey last year. Turning cheap daytime solar into electricity you can actually use at night just got a lot cheaper.
