

Principle of solar power generation for primary school students

Overview

This series of 35 lessons is designed to give K-12 educators a simple yet thorough way to explain and demonstrate the basic principles of photovoltaics (electricity from solar cells) to students of all ages. The sun has produced energy for billions of years and is the ultimate source for all of the energy sources and fuels that we use today. These hands-on experiments with miniature solar cells begin with ways of testing voltage, amount of energy. Like most stars, the sun atoms. Solar power is power generated directly from sunlight.

ENERGYOwner: NEEDSOLAR COLLECTORSA solar collectorSOLAR SPACE HEATINGSOLAR WATER HEATINGSOLAR ELECTRICITYDish/Engine Systems are like satelliteConcentrated Solar Power (CSP)is one way to capture sunlight and change it into usable heat energy. A closed car on a sunny day is like a solar collector. As sunlight passes through the car's windows, it is absorbed by the seat covers, walls, and floor of the car. The absorbed energy changes into heat. The car's windows let radiant energy in, but they don't let all the heat out See more on
