

Reduced carbon emissions venezuela

Overview

To achieve its mitigation goals, Venezuela is focusing on reducing greenhouse gas emissions by promoting renewable energy sources, sustainable transportation, and energy efficiency. This breakdown is strongly influenced by the energy mix of a given country, and changes as a country shifts to or from a given energy source. Despite efforts to reduce these emissions, the trajectory of CO2 emissions globally remains far higher than what is needed to avoid the worst effects of climate. The ultimate goal is to raise awareness and sensitize citizens about climate change and the environmental impact it causes. 36% of the global total for that year. On a per person basis, emissions are 7.
