

Rooster crowing under the photovoltaic panels

Overview

The most effective way to protect your solar panels from birds and critters is to install critter guards. Solar energy systems are designed to offer long-term value, clean power, lower electricity bills, and a sustainable future. But there's one problem that continues to frustrate installers and homeowners alike: birds nesting under rooftop solar panels. Bird droppings from crows build up with. Here are some of the most common types of interference: Chewed Wires: Rodents have a habit of gnawing through exposed wiring, which can result in short circuits, power disruptions, or even fire hazards. Bird nests are another problem. Critter guards can prevent up to 90% of animal-related damage to solar panels, protecting farmers' renewable energy investments.
