

Rural solar photovoltaic panels on roof

Overview

This guide covers roof types, structural considerations, mounting systems, incentives, costs, and maintenance to help rural property owners make informed decisions. Metal and standing-seam roofs are ideal; asphalt shingles and wood require reinforcement. **Barn Solar Outperforms Residential:** Agricultural solar installations cost 15-25% less per watt than residential systems due to simpler roof configurations, larger system sizes, and easier installation access. Most barn systems achieve payback periods of 6-10 years compared to 8-12 years for residential. The rooftop of a farm building can be an ideal location for a solar installation (Figure 1). Rooftops have large surface areas with few obstructions, and the landowner typically has control over objects that might shade the solar modules over the life of the installation. Below are some essential tips to guide you through the process. Ground-mount options can utilize fallow land or integrate with grazing areas.
