

Safety regulations for wind turbine generator sets

12.8V 200Ah

Overview

The Wind Turbine Safety Rules (WTSRs) are a model set of Safety Rules and procedures to help formalise a Safe System of Work (SSoW) to manage the significant risks associated with a wind turbine, both onshore and offshore. They have been developed by wind farm owners and operators for the purpose. Wind energy ordinances adopted by counties, towns, and other types of municipalities are one of the best ways for local governments to identify conditions and priorities for all types of wind development. With rotor diameters now exceeding 200 meters and turbine heights rivaling skyscrapers, safety regulations aren't just paperwork—they're the thin line between sustainable energy and industrial.
