

# Should we install solar power in old houses

## Overview

---

With rapidly declining costs and increased incentives in 2024, switching to solar energy become more accessible than ever. Solar panels. For many homeowners, solar panels are a long-term investment in energy cost savings. On average, it takes between 7-10 years to break-even, leaving decades to accumulate savings. The cons include high initial costs, specific roof requirements, possible higher property taxes and storage costs. Crown molding, original hardwood, cozy porches—they just don't build them like that anymore. The pathway entails: 1) Evaluating the structure's suitability for solar panel installation, 2) Identifying funding options for retrofit projects that facilitate solar energy implementations, 3). Let's walk through the myths, facts, and proven techniques that make solar power not just possible, but practical and profitable for older homes. Older roofs often use traditional or handmade materials — like slate, clay tiles, or Yorkshire stone — which leads many people to believe solar is off.
