

# Side and middle pressure blocks of photovoltaic bracket

## Overview

---

There are mainly two products of side pressure blocks and medium pressure blocks. Photovoltaic brackets are used to support solar photovoltaic equipment, so they need to have strong load-bearing capacity and stability, but it is difficult to do so by the bracket alone, and some auxiliary accessories are required. Then the key we want to talk about is. Our photovoltaic bracket structure explanation diagram set reveals what engineers won't tell you over coffee. Did you know 23% of solar system failures originate from bracket issues?

That's like buying a Ferrari and using bicycle tire Let's face it - photovoltaic brackets are like the unsung heroes. Aluminium Mid Clamp (also known as middle clamp) is one of the important solar mounting accessories, which is used for clamping solar panels between two solar modules. The mid. The solar support assembly is made of anodized aluminum alloy AL6005-T5 material, which has the characteristics of high strength, resistances, UV resistances, high frequency insulation, etc. All installations shall be in accordance with NEC requirements in the USA. These systems have the advantages of light weight, strong bearing capacity, large span, low cost, less steel cons.

## Side and middle pressure blocks of photovoltaic bracket

### Photovoltaic Bracket Structure Explained: Diagrams & Insider Tips

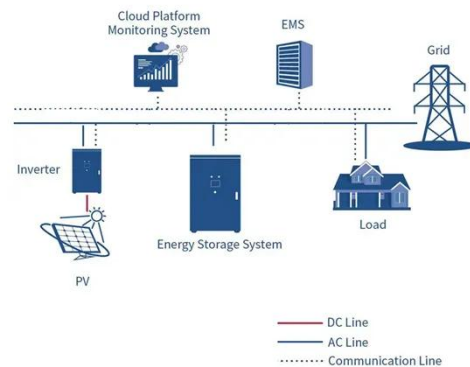

Our comparison diagrams settle the debate: Aluminum brackets are 65% lighter but cost 40% more. Steel's heavier but cheaper - choose like you're picking between a pickup truck and sports car.
