

# Single-phase off-solar container grid inverter parallel connection

## Overview

---

Make sure the panel is not connected to the grid. Wire each inverter into a different bus on the panel. The supported maximum output power is 24KW/30KVA. This configuration allows several units to work as a single, more powerful inverter. Success depends entirely on precise coordination, specifically phase synchronization and load. Lux power inverter support “Parallel Connection”, which means you can combine multiple inverters together to get bigger back-up power. Parallel connecting multiple solar inverters allows for enhanced efficiency and increased power output in a solar power system.
