

Solar air conditioning energy saving

Overview

Solar air conditioners are a cost-effective cooling and heating solution that can save energy costs of up to 100% of cooling or heating costs. These innovative systems harness the abundant energy of the sun to cool indoor spaces, thereby reducing reliance on. The energy used by power plants to support that many air conditioners produces 117 million metric tons of carbon dioxide annually. Carbon dioxide is considered a greenhouse gas. In the US, 88% of households use air conditioning. That number is 92% in the Midwest and 93% in the South.
