

Solar air conditioning to be developed in the Middle East

Overview

The Middle East and Africa (MEA) region has emerged as a significant market for solar thermal hybrid air conditioners (STHACs), driven by escalating energy demands, increasing environmental concerns, and the region's abundant solar resources. In this study, a solar hybrid cooling system for an institutional building is investigated, which combines solar photovoltaic. Air conditioning is estimated to consume half of the Kingdom's electricity demand — an unsustainable level for an urbanizing country, even one that is energy rich. As of 2023, the market size for STHACs in MEA is. It involves rethinking how cooling is delivered, what powers it, and how systems are managed over time. For the Middle East, where demand for cooling is among the highest globally, addressing this challenge is fundamental to any environmental strategy. Technological innovation is playing a key role.

Solar air conditioning to be developed in the Middle East

Middle East and Africa Solar Thermal Hybrid Air Conditioner Market

The analysis is structured to be adaptable to any Middle East and Africa Solar Thermal Hybrid Air Conditioner Market while providing actionable, region-specific insights.
