

# Solar energy policy gambia

## Overview

---

Gambia's solar revolution represents a bold and necessary stride toward energy security, economic development, and environmental sustainability. While the financial and technical challenges are substantial, the progress made with the Jambur and Soma projects demonstrates tangible energy for all by 2030. This National Energy Compact provides the roadmap to accelerate the pace of implementation to the SDG7 target of 2030. The process towards universal electrification is anchored on The Gambia's multi-year energy sector roadmap (2021-40) and Yiriwaa National Development Plan. The Gambia entered a new era of energy development in April 2023 with the inauguration of its first large-scale solar energy facility in Jambur. The government has undertaken several initiatives such as providing fiscal concessions, investing in R&D, and improving its regulatory regime to attract foreign investments. Spearheaded by the National Water and Electricity Company (NAWEC), this transition is driven by a precarious. The Gambia has committed to ambitious plans in the near term, including President Barrow's desire to achieve universal electrical access by 2025, as well as a commitment to reduce CO2 emissions in alignment with the 2015 Paris Accords, with a focus on imports from Senegal, Guinea, and Cote. The Gambia is set to boost its renewable energy capacity with the construction of a 120 MW solar power plant by Turkey's Kalyon Enerji.
