

# Solar energy storage integrated device cost

## Overview

---

At the present time, the average cost of a solar battery storage system ranges between \$500 to \$800 per usable kWh, depending on the product, region, and installation complexity. As NLR's Distribution Grid Integration Unit Cost Database contains unit cost information for different components that may be used to integrate distributed solar photovoltaics (PV) onto distribution systems. The database is focused on hardware and software costs and contains more than 335 data points. Grid-connected solar energy storage systems with hybrid configurations allow property owners to maintain power during blackouts and strategically shift energy consumption based on cost structures and requirements. Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. Battery installation adds an extra \$2,000 to \$3,500. This work has grown to include cost models for solar-plus-storage systems. NLR's PV cost benchmarking work uses a bottom-up.
