

Solar glass to electricity system

Overview

Solar glass works by utilizing the photovoltaic effect, which is the process of converting light into electricity. This proprietary Inorganic Nano Technology and Solar Collector does not degrade from IR like typical solar cells do. DC electricity produced from Energy Glass Solar™ can be inverted and returned to the grid, charge batteries, be wired direct to DC electronics, and offers a value-added solution for. Their patented technology and ClearVue PV product offer the first truly clear solar glass on the market, and available to purchase now, which promises to fill cities with buildings that actively reduce energy usage while also generating electricity to contribute to building running costs. The. Single building installation can avoid 2. 2 million miles of CO₂ vehicle pollution; 12-times more than solar. When modeled for buildings, engineered to outperform rooftop solar by 50-fold: Apply to acres of glass windows on buildings rather than limited rooftop space. The window system facilitates this process by allowing visible light to pass through the glass panels, while invisible wavelengths of light are deflected to the edges of the glass, where they are converted into electrical energy.

Solar glass to electricity system

Converting Sunlight to Electricity with Clear Solar Glass

To the naked eye, the product looks just like regular glass, but with the unique ability to harnesses the power of the sun, which turns any building into an energy-generating solar array.
