

Solar panel efficiency and price

Overview

Today, solar panels cost about \$3.00 per watt on average and are between 19% and 22% efficient. The price of solar panels could continue to drop, but it can depend on technology, market conditions, and government policies and programs. In 2025, solar panels are cheaper and more efficient than ever! Solar panels becoming more affordable will be a key player in the expansion of residential solar, contributing to the combat against climate change - and higher efficiency ratings can help keep costs down and guarantee customers will. Advances in technology, government incentives, and increased demand have driven down the cost of solar panels and improved solar panel efficiency over time. Improved manufacturing and growing demand have made solar power more accessible and effective than ever. But over the years, advancements in technology have dramatically improved both aspects.
