

# Solar photovoltaic panels radiate radiation to pregnant women

## Overview

---

The consensus among scientists and health organizations is that solar panels are safe for pregnant women and children. The EMF levels are generally low and well within safety guidelines. FAQ 8: Do different types of solar panels emit different levels of radiation?

. The short answer is no, solar panels do not emit harmful ionizing radiation. The concerns often stem from a misunderstanding of the. Most of the ways a pregnant woman may be exposed to radiation, such as from a diagnostic medical exam or an occupational exposure within regulatory limits, are not likely to cause health effects for a fetus. However, accidental or intentional exposure above regulatory limits may be cause for. What I found was a significant increase in rf radiation (from hundreds to thousands of times higher) inside solar homes, with no other possible sources. These waves include radio waves, microwaves, infrared, visible light, ultraviolet rays, X-rays, gamma rays, and more, spanning a wide range of frequencies from low to high. Let's start with what electromagnetic field (EMF) radiation actually means.
