

Solar power generation base ranking

Overview

The top five countries are China, United States, India, Japan, and Germany, based on solar power generation and installed capacity. A report from the National Renewable Energy Laboratory found that solar power accounted for 54% of new U. electricity generation capacity in 2023, with 22 states generating more than 5% of their electricity from solar, led by California at 28. The following table lists these data for each country: Total generation from solar in terawatt-hours. 1985 2024 1990 1995 2000 2005 2010 2015 0 TWh 5,000 TWh 10,000 TWh 15,000 TWh 20,000 TWh 25,000 TWh 30,000 TWh Data source: Ember (2026); Energy Institute - Statistical Review of World Energy (2025) - Learn more about this data Note: "Other renewables" include geothermal, wave, and tidal. In 2025, solar power is the cornerstone. This ranking tracks the share of electricity generated from renewable sources (hydro, wind, solar, bioenergy and other renewables) as a percentage of a country's total electricity generation. It is widely cited — and widely misunderstood — because many readers silently substitute a different idea:.

Solar power generation base ranking

Solar power by country

The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar power capacity reached 1 TW, increasing to 2 TW in 2024. The top ...

Armenia due its geographical and climate properties is well-suited for the solar energy utilization. According to the Ministry of Energy Infrastructure and Natural Resources of Armenia the country is capable of producing 1850 kWh/m per year. For comparison European countries are capable of around 1000 kWh/m per year on average. Two main panel types utilized in Armenia are the photovoltaic
