

Solar power generation in Hong Kong Lion Community

Overview

Located on a valley slope at the South East New Territories Landfill in Tseung Kwan O, the solar farm is estimated to generate 1,200,000 kWh of green electricity annually, enough to power approximately 360 households. By replacing conventional fuel sources with this renewable energy, it aims to. The renewable energy identified as having the potential of wide application in Hong Kong are solar energy and wind energy. Hong Kong is abundant with sunlight. Solar energy can be used to produce hot water or directly transform into electrical power. This project not only demonstrates the enormous potential of rooftop solar projects in Hong Kong, it also and provides government. Link Asset Management Limited (Link), the manager of Link Real Estate Investment Trust (Link REIT, stock code: 823), announced today the completion of its solar panel installation programme spanning 53 properties with 58 solar power systems that exceed a total installed capacity of 4,500. Veolia, Sun Hung Kai Properties (SHKP), and CITIC Pacific recently held a groundbreaking ceremony for the city's first privately funded solar farm on a landfill.
