

Solar power generation is undervalued

Overview

Solar and wind power have become increasingly cost-competitive over the past decade, prompting claims that they are now the cheapest sources of new electricity. renewable. Spain, whose generation mix on April 28 was 59% solar and 12% wind, with only 22% coming from nuclear and gas, went into a major blackout as 15 gigawatts of solar power went off-line because there was not enough inertia in the system from traditional generating sources (gas, coal and nuclear) to. Electricity generation by the U. electric power sector totaled about 4,260 billion kilowatthours (BkWh) in 2025. In our latest Short-Term Energy Outlook (STEO), we expect U. 6% in 2027, when it reaches an annual total of 4,423 BkWh. The. The cost of solar power has plummeted as of 2023 and the years preceding it. Solar power is already providing the “cheapest electricity in history” and is expected to play a pivotal role in the global transition away from fossil fuels. The technology accounted for two-thirds of the world's new electricity capacity and two-fifths of new generation in 2024, according to the. It potentially prices are consumers, solar deployment this decline in Berkeley Lab, appearing endanger value is not as good for producers.

Solar power generation is undervalued

Solar power generation drives electricity generation growth over the

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...
