## Overview

---

Photovoltaics (PV): Devices that convert solar energy into electricity using semiconductors (this conversion is called the photovoltaic effect). Power output/rating: The number of watts a solar panel produces in. Our solar energy glossary offers a collection of key terms and phrases, explained simply and concisely. A type of electrical current that circuits and appliances in most homes utilize. Expressed as a sine wave, the current of AC passes through zero when it changes direction, which makes it a safer. Gigawatt (GW): We measure the cumulative capacity of community solar nationwide in terms of GW. Kilowatt-hour (kWh) measures total energy over time. " Example: a 5 kW PV array under strong sun may deliver about 5 kW at a moment in time. Solar energy is the radiant light and heat from the Sun, harnessed using various technologies like photovoltaics, solar thermal energy, and artificial. Definition: A type of electrical current in which the flow of electricity periodically reverses direction.
