

# Solar power is not enough

## Overview

---

In situations where the quantity of solar energy generated is insufficient, several strategic approaches may be adopted. Evaluate overall system performance, 2. Enhance energy storage capabilities, 4. Consider supplemental. Real-world performance expectations: Solar panels typically achieve only 75-85% of their rated capacity under normal conditions due to temperature effects, inverter losses, and varying weather patterns—this is completely normal and not a sign of system failure. Soiling is the #1 culprit: Dirt. One of the most common complaints we hear from homeowners is that their electricity bills are still high because their new solar panels are not producing enough power. When most of us think about renewable energy, we usually mean solar panels and wind farms. Although hydro or geothermal power make for great carbon-free renewable power where they exist, for most of the. Solar panels offer sustainable energy solutions, however, there may be concerns if they don't generate sufficient electricity. This can lead you to question - why are my solar panels not producing enough power?

While weather conditions could be the most common reason, we will explain other causes. Solar panels offer an excellent return on investment, and the savings you can expect over their 25- to 30-year service lives are much higher than their upfront costs. A 100W panel rated for 100W at 77°F will only produce 70-80W on a 95°F day, and that's normal.
