

# Specialized for monitoring solar photovoltaic panels

## Overview

---

A solar monitoring system can help you keep track of your solar panel system's energy production, usage, and efficiency in real-time. Solar panels sit on your roof for decades, silently making electricity from the sun, saving you money and saving the planet a little bit each day. Commercial site monitoring is now managed by the new ONE for C&I platform. Current transformers (CTs) clamp around where the solar connects to the electrical system or grid. CTs wire to an electricity meter which communicates with a gateway to send data to the cloud. Companies in this industry create hardware and software solutions that track system performance, detect issues, and improve. Solar monitoring systems, as their name implies, allow you to monitor the output and performance of your solar panels. If you plan to invest in solar panels, you can't go wrong.

## Specialized for monitoring solar photovoltaic panels

---

### PV Solar Panel Monitor

Get the most out of your solar panels with integrated monitoring. Read data directly from many inverters with our commercial-grade gateway, or measure production with our electric meter.
