

# Strategy for opening explosion-proof fans in energy storage containers

## Overview

---

Scientists at the Pacific Northwest National Laboratory developed this patent-pending deflagration prevention system for cabinet-style battery enclosures. Intellivent is designed to intelligently open cabinet doors to vent the cabinet interior at the first sign of explosion risk. The safety and reliability of energy storage systems (ESS) are pivotal to safeguarding the full lifecycle value of customer assets. At CLOU, we deeply respond to customers' safety needs.

-Saf™ explosion vents for Battery Enclosures to safely move the explosion upward and away from the vents, away from the BESS container, and into the atmosphere. The BESS standards recommended by NFPA 855 and 68, EN 14491, and EN 14491, and EN 14491 performance depends upon appropriate mounting to the BESS. Battery Energy Storage Systems (BESS) represent a significant part of the shift towards a more sustainable and green energy future for the planet.
