

# Structure diagram of the back of photovoltaic panel

## Overview

---

Explore the structure and components of a solar panel diagram, understanding its key elements and how each part contributes to harnessing solar energy. Solar panels are not a single functional element, but modules composed of multiple structural units. Each component plays a distinct role in optical protection, electrical energy conversion, mechanical support, and electrical connection. While power rating and efficiency are often the most. Focus on the following components when analyzing a photovoltaic module: the photovoltaic cells, the protective glass, and the backsheet. The whole of it is vacuum encapsulated in a polymer as transparent as possible.

## The structure of a photovoltaic module

If we try to describe in a few words the structure, we could say that a photovoltaic panel is composed by a series of photovoltaic cells protected by a glass on the front and a plastic material on the rear.
