

Tehran renewable energy growth

Overview

Iran has increased its installed renewable energy capacity by 157 per cent over the past 18 months. This was reported by Tehran Times, a partner of. Iran has ramped up its solar power growth by launching 250 megawatts (MW) of new solar capacity. President Masoud Pezeshkian opened the new solar plants via video link. Additionally, he launched construction on another 450 MW. Characterized by excessive reliance on fossil fuels and frequent power outages, Iran has a lot of unrealized potential when it comes to renewable energy, especially solar and wind power, but has been slow in developing these sources compared to neighboring countries. Use Up/Down Arrow keys to increase or decrease volume. In particular, it looks at the results in a country such as Iran, which has a high potential for using solar energy. A comparison of the energy consumption of selected case.
