

Tesla neoen cooperation lithium battery energy storage

Overview

The Tesla Megapack 2XL is going to power a new giant 877 MWh battery project developed by France's Neoen in Western Australia. Neoen actually played a part in that. Neoen (ISIN: FR0011675362, Ticker: NEOEN), one of the world's leading producers of exclusively renewable energy, has successfully implemented Tesla's Virtual Machine Mode (VMM) at its 150 MW / 193.5 MWh Hornsdale Power Reserve (HPR), Australia's second largest lithium-ion battery. HPR has secured. Neoen Australia says it has begun construction of a new big battery project in South Australia, which will also be the first project in the world to deploy the new Tesla Megablock product, the next generation of the company's grid-scale battery tech. The project consists of a 315 MW wind farm comprising 99 wind turbines, located in South Australia, and a battery storage system that provides frequency control and grid. Tesla has inked a memorandum of understanding (MoU) with the Western Australian government to develop a battery re-manufacturing facility in Collie, home of Neoen's 2.2 GWh battery energy storage system (BESS). Before the Megapack, Tesla had.
