

The United States ranks first in solar power generation

Overview

California once again takes first place among the top states generating electricity from solar power this month. 4% of the United States' total of 24,519 thousand megawatt-hours, according to ChooseEnergy. 8 terawatt-hours (TWh) in the United States. With over 54 GW of solar installed, enough energy to power over 15 million homes. 18 trillion kilowatt-hours of total electricity at utility-scale power generation facilities, with renewable energy sources contributing roughly 21% of this total and solar power making up 3. Solar power generation has increased drastically over the past two decades, especially since 2011, when it hovered just below two terawatt. In 2022, generation from renewable sources—wind, solar, hydro, biomass, and geothermal—surpassed coal-fired generation in the electric power sector for the first time. Renewable generation surpassed nuclear generation for the first time in 2021 and continued to provide more electricity than nuclear.

The United States ranks first in solar power generation

Which State Generates The Most Solar Power?

Based on the latest EIA and SEIA data, the state that produces the most solar power is California, followed by Texas and Florida. 1. California -- The Solar Power Leader. California ...
