

The earliest solar power station in Northeast China

Overview

The Xinghuo PV power station in Heilongjiang province, north-east China, in operation since 2022. China is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. [1]. 1983: China's first 10kW civil photovoltaic power station, which is also the oldest existing photovoltaic power station in China, was built in Xiaocha Village, Yuanzi Township, Yuzhong County, Gansu Province, providing domestic electricity for 130 local households. From 2020 to 2024, Heilongjiang increased its share of clean power generation by more than any other province in China except Liaoning, also in the north-east (Image: Xinhua / Alamy) China has been. China installed over 373 GW of renewables in 2024, reaching a total installed renewable capacity of 1,878 GW by the end of the year. The country aims to have 80% of its total energy mix come from non-fossil fuel sources by 2060, and achieve a combined 1,200 GW of solar and wind capacity by 2030.

As of 2020, China had more than 150 dams with generating capacity of more than 300 megawatts and installed capacity of 369 gigawatts. As of 2021, China operates four of the world's six largest dams. These include the world's biggest (Three Gorges Dam, with 22.5 gigawatts capacity) and second biggest (Baihetan Dam).
