

# The first energy storage power station is put into operation

## Overview

---

On May 26, the world first non-supplementary combustion compressed air energy storage power station — China's National Experimental Demonstration Project Jintan Salt Cavern Compressed Air Energy Storage, technologically developed by Tsinghua University mainly, was officially put. On May 26, the world first non-supplementary combustion compressed air energy storage power station — China's National Experimental Demonstration Project Jintan Salt Cavern Compressed Air Energy Storage, technologically developed by Tsinghua University mainly, was officially put. The first phase of the world's largest sodium-ion battery energy storage system (BESS), in China, has come online. The first 50MW/100MWh portion of the project in Qianjiang, Hubei province has been completed and put into operation, state-owned media outlet Yicai Global and technology provider HiNa. The first phase of Datang Group's 100 MW/200 MWh sodium-ion energy storage project in Qianjiang, Hubei Province, was connected to the grid. From pv magazine ESS News site China's state-owned power generation enterprise Datang Group said on June 30 that it had connected to the grid a 50 MW/100 MWh. The energy storage station can store 100,000 kWh of electricity on a single charge, which can meet the needs of around 12,000 households for a day. (A 100 MWh-scale energy storage station using sodium-ion batteries went into operation on Jin Hubei, central China.

## The first energy storage power station is put into operation

---

### First new-type energy storage power station put into operation in

The construction of grid-side new-type energy storage projects is a key task for ensuring power supply during peak summer demand in Jiangsu Province in 2024.
