

The solar power controller light is not on

Overview

When the controller sees no light on the solar panel, it thinks it is night-time and shows low voltage. The first step is to determine how the panels are wired, series, or parallel. Chances are, the lines have disconnected and the display simply can't power on. Reconnect or Replace the. The solar charger is unresponsive The solar charger is unresponsive (inactive) if the display is not illuminated, there is no charging activity, and it is not communicating with the VictronConnect app via Bluetooth or the VE. If everything appears fine and the issue. Possible issues could be a controller not putting current to the battery or a solar panel outputting voltage but not current or a full battery and the controller not putting current to the battery because it is full.
