

# Turkmenistan uses solar energy or AC power

## Overview

---

Turkmenistan, a country rich in natural gas reserves, is now actively exploring solar energy to diversify its energy mix. While AC power remains the backbone of its electrical grid, renewable energy adoption is gaining momentum. Recent advancements in the renewable energy industry in Turkmenistan have significantly increased the level of exports to neighboring. These strategies create opportunities for foreign investors to participate in the development of wind and solar energy projects, energy-efficient infrastructure, and smart grid technologies. Although Turkmenistan has a high potential for renewable energy sources, facilitated by climatic and geographical conditions, the country has virtually no market for renewable energy and the sector is just beginning to develop.

## Turkmenistan uses solar energy or AC power

---

### Turkmenistan

Energy production includes any fossil fuels drilled and mined, which can be burned to produce electricity or used as fuels, as well as energy produced by nuclear fission and renewable power sources such ...
